

DAPPING CUTTER SET

SKU: 1191B

This Durston Dapping Cutter Set is a fast, effective way to create rounded discs from sheet wax and metal for your jewellery designs. Will cut soft metals such as silver, gold, brass or copper up to 0.32mm (28 gauge) thick.

The 20 piece set is presented in a Durston storage tray, and contains dapping cutters ranging in size from 3mm to 22mm, made from hardened, ground tool steel for achieving accurate results.

The dapping cutters are excellently designed to absorb the reaction caused by hammering, preventing metal crystallization taking place, thus extending the life of the tools.
