 - 2 x 60w Industrial Transducer for Long Life
 - Strong 40 KHz of power
 - 3 Litre Capacity
 - 1° - 80° Temperature Control
 - 1 - 60 Minutes Timer Control
 - Max Load: 1 kg
 - Tank Size L240mm x W135mm x H100mm
 - Basket Included
-

PRODUCT DESCRIPTION

The Durston Pro Ultrasonic Jewellery Cleaner 3.2L has an easy-to-use Control Panel, along with an LED display for cleaning time and temperature. Cleaning is fast, efficient and effortless.

The heavy gauge stainless steel tank has been created to ensure long time usage. It also features a “degas function”, with the ability to activate the cleaning liquid by removing any air bubbles which will interfere with the Ultrasonic Cleaning action.

The high-performance transducer creates an effective Ultrasonic wave action for enhanced cleaning.

The timer can be set between 1-60 minutes and the cleaning temperature range is 0° - 80°.

The tank size is 240mm long x 135mm wide x 100mm high. The external dimensions are 270mm x 180mm x 230mm and weighs 2.8kg.

The tank can accommodate a maximum load of 1kg. More than adequate for any professional Jeweller or Jewelry Workshop

The unit also features a 3.2-litre tank, with ultrasonic frequency of 40 kHz, heating power of 200W and power

consumption of 320W.

The unit includes 2 moulded handles and a stainless steel lid that reduces noise, accelerates the heating process and can also be inverted to use as a drip tray after use.

Important operating guidelines

- Unit needs to be switched off hourly to cool for 5-10 minutes as continuous running raises the risk of overheating the transducer, especially if the temperature has been set at max.
- Allow the tank/contents to cool before emptying / refilling with cold liquid.
- Never operate the machine without fluid in the tank. monitor for evaporation and top up as necessary.
