## PRODUCT DESCRIPTION

The 316 Stainless Steel Anode, sized at 20cm x 4cm, is a high-performance tool tailored for gold plating processes in baths from 600ml to 2L. Its construction from medical-grade 316 stainless steel not only ensures unmatched longevity but also superior performance in B1RL gold plating and alkali plating baths. This anode is designed to meet the rigorous demands of professional plating setups, providing a reliable and efficient solution for achieving optimal plating results. The inclusion of a durable, 30cm PVC-coated cable with an alligator clip ensures a secure and corrosion-resistant connection, making it a valuable addition to your plating equipment.
